File: Updated GWPS and SSLs at the Allen
Fossil Plant East Ash Disposal Area
CCR Unit

Date: July 15, 2022

Reference: Update on Statistically Significant Levels (SSLs) (40 CFR § 257.95(g)) - CCR Rule Groundwater Monitoring - Allen Fossil Plant, East Ash Disposal Area CCR Unit

In accordance with the federal regulations for management of coal combustion residuals (CCR Rule; 40 CFR Part 257, Subpart D), the Tennessee Valley Authority (TVA) is currently conducting Assessment Monitoring at the East Ash Disposal Area CCR Unit at its Allen Fossil Plant (ALF) in Memphis, Tennessee. The East Ash Disposal Area consists of one CCR surface impoundment subject to the CCR Rule with a single-unit groundwater monitoring system.

In 2021, TVA evaluated potential changes to the background well at ALF which was used in the calculation of groundwater protection standards (GWPS). TVA changed the designated background well ALF-210 to a cross-gradient well, added well ALF-217 as a downgradient well, and designated wells ACC-5B and ALF-216 as the background wells in the certified monitoring system. The certified monitoring system was updated in December 2021.

As required by the CCR Rule, the owner or operator of a CCR unit shall establish GWPS for Appendix IV parameters detected during Assessment Monitoring and determine if one or more Appendix IV parameters are detected at statistically significant levels (SSLs) above their GWPS. GWPS for all Appendix IV parameters were originally established and documented in a notice dated October 15, 2018, as required by 40 CFR § 257.95(d)(2) and are provided on Table 1.

As part of ongoing Assessment Monitoring, the first semiannual assessment monitoring event for 2022 occurred January 4-11, 2022, with the additional "resample" event occurring February 23-28, 2022. This technical memorandum presents GWPS and lower confidence bands (LCBs) that have been updated with data collected during the first semiannual monitoring event and resample event for 2022, as well as any identified SSLs after incorporating the additional data collected in 2022. The identification of SSLs was performed as a two-step process:

1. Historical sampling results (November 2016 through February 2022) for Appendix IV parameters from each downgradient well were compared directly to the updated GWPS. If sample concentrations were below the updated GWPS, no SSLs over the GWPS were identified.
2. Where the direct comparison indicated a concentration above the GWPS, further statistical analysis was performed to identify levels statistically greater than the GWPS, using procedures recommended in the United States Environmental Protection Agency (USEPA) Unified Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities (EPA 530/R-09-007; March 2009). Comparisons were made against a fixed GWPS via LCBs. For each situation where a parameter concentration was greater than the GWPS in step one, the 99% LCB of the fitted line in that monitoring well was calculated using CCR Rule monitoring data collected from November 2016 through February 2022. As recommended in the Unified Guidance, where the 99% LCB exceeds the GWPS at the last sampling event an SSL was identified for the constituent/well pair.

Based on the statistical analysis performed in 2022, there continues to be SSLs above the GWPS for arsenic in wells ALF-202, ALF-203, and ALF-204, and for molybdenum in wells ALF-202 and ALF-203. SSLs above the GWPS were recorded for arsenic in wells ALF-212, ALF-213, and ALF-217. TVA will continue to conduct groundwater monitoring and reporting pursuant to 40 CFR § 257.95.

Reference: Update on Statistically Significant Levels (SSLs) at the Allen Fossil Plant - East Ash Disposal Area CCR Unit

TABLE 1: Statistically Significant Levels Above GWPS - ALF East Ash Disposal Area CCR Unit

Appendix IV Parameter	GWPS (a)	Updated GWPS (b)	Downgradient wells with analytical results above GWPS (c)	Updated LCBs (d)	SSL LCB > GWPS (e)
Antimony (µg/L)	6	6	None	NA	NA
Arsenic (µg/L)	17.6	10	ALF-202	368	Yes
			ALF-203	395	Yes
			ALF-204	40	Yes
			ALF-212	12	Yes
			ALF-213	13	Yes
			ALF-217	48	Yes
Barium (µg/L)	2,000	2,000	None	NA	NA
Beryllium (µg/L)	4	4	None	NA	NA
Cadmium (µg/L)	5	5	None	NA	NA
Chromium (µg/L)	100	100	None	NA	NA
Cobalt (µg/L)	6	6	None	NA	NA
Fluoride (µg/L)	4,000	4,000	ALF-202	1,922	No
			ALF-203	1,600	No
Lead (µg/L)	15	15	ALF-203	6	No
Lithium (µg/L)	40	40	None	NA	NA
Mercury (µg/L)	2	2	None	NA	NA
Molybdenum (µg/L)	100	100	ALF-202	316	Yes
			ALF-203	387	Yes
			ALF-205	26	No
Radium-226+228 (pCi/L)	5	5	None	NA	NA
Selenium (µg/L)	50	50	None	NA	NA
Thallium (µg/L)	2	2	None	NA	NA

NA – Not applicable

- (a) GWPS documented in notice dated October 15, 2018 [reported in micrograms per liter (µg/L)]
- (b) GWPS updated as of June 15, 2022, with two additional sample results collected on January 4-11, 2022, and February 23-28, 2022 [reported in µg/L]
- (c) Downgradient wells with analytical results above GWPS November 2016 through February 2022 (per 40 CFR § 257.95(b) and (d))
- (d) Most recent value of 99% lower confidence band (LCB) on the mean of Appendix IV groundwater sampling events between November 2016 and February 2022. Upper confidence band (UCB) not shown as it is greater than LCB.
- (e) SSL: “statistically significant level” over GWPS occurs when the updated LCB value at the last sampling event exceeds the updated GWPS
