

**Plant:** Bull Run Fossil (BRF)  
**Date:** August 17, 2016  
**Subject:** Annual CCR Fugitive Dust Control Report  
**Reference:** Title 40  
Part 257: *Criteria for Classification of Solid Waste Disposal Facilities and Practices*  
Subpart D: *Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments*  
Operating Criteria: §257.80, *Air Criteria*

---

## 1. Introduction

The initial CCR Fugitive Dust Control Plan was submitted on September 4, 2015. As required by the CCR Rule (40 CFR 257.80), an annual report describing actions taken to control CCR fugitive dust, reporting citizen complaints, and corrective action taken must be submitted. The initial annual report must be completed no later than 14 months after placing the initial CCR fugitive dust control plan in the facility's operating record. Subsequently, annual reports will be submitted 12 months after the completion of the initial annual report.

### 1.1. Plant Description

Bull Run Fossil (BRF) is a fossil-fueled, steam-electric generating plant operated by TVA that has one coal-fired generating unit. It is located at 1265 Edgemoor Road in Clinton, Anderson County, Tennessee. The Site consists of one coal-fired generating unit and one permitted active ash disposal area at the recently completed lateral expansion of the existing Dry Fly Ash Stack. The expansion is located within the northeastern portion of BRF along Edgemoor Road, where CCR materials generated by the power generating station are processed. The expansion stack accepts all CCR materials generated at BRF.

## 2. Fugitive Dust Control Measures

The current Fugitive Dust Control Plan states that the primary dust control measure will consist of conditioning and wetting of CCR material and associated CCR management activities. This application has historically been an effective measure. The plan also states that other dust control measures may be utilized in combination with the current measures with the following measures listed.

- Berms constructed as wind breaks
- Intermediate soil cover
- Chemical dust suppressants
- Sweeping of haul roads
- Limiting material drop heights
- Mobilization and use of additional water trucks

Since the submission of the BRF Fugitive Dust Control Plan, the following dust control measures in place.

- Intermediate soil cover on exterior slopes.
- Sweeping of haul roads as needed.

- Mobilization and use of additional water trucks. Typically, one water truck is utilized daily; however, a second truck is utilized when conditions are warranted.

### **3. Record of Citizen Complaints**

The Fugitive Dust Control Plan allows for citizen input by providing a toll free number for citizens to contact and submit complaints and/or concerns relative to dust control. When complaints are submitted, TVA will assign the appropriate CCPM Management personnel to investigate the complaint/concern and implement any additional dust control measures needed.

Since the implementation of the Fugitive Dust Control Plan, no complaints and/or concerns have been submitted by the public.

### **4. Summary of Corrective Action**

Corrective actions have not been implemented since no complaints/concerns have been submitted.
