Chattanooga, Tennessee 37402

**Groundwater Monitoring System
Stilling Pond (including Retention Pond)
TVA Cumberland Fossil Plant
Cumberland City, Tennessee**

1.0 Introduction

This letter documents AECOM's certification of the groundwater monitoring system for the Tennessee Valley Authority (TVA) Cumberland Fossil Plant coal combustion residual (CCR) facility Stilling Pond (including Retention Pond). Based on the information evaluated by AECOM, the groundwater monitoring system, first year baseline monitoring phase of TVA's Coal Combustion Residuals (CCR)-Rule Groundwater Quality Monitoring Program, meets the performance standard specified in the Final CCR Rule at 40 CFR § 257.91.

2.0 Summary of Findings

In establishing the groundwater monitoring system for the Stilling Pond (including Retention Pond), at the Cumberland Fossil Plant in Cumberland City, Tennessee, AECOM evaluated available groundwater data, developed a hydrogeologic investigation and characterization of the site, and designed and reviewed the installation of the monitoring wells. Based upon review of the available information, the groundwater monitoring system at the Stilling Pond (including Retention Pond) meets the performance standard specified in 40 CFR § 257.91, based on the following criteria:

- There are a sufficient number of wells installed at appropriate locations and depths to yield groundwater samples that accurately represents the quality of background groundwater unaffected by CCR and the quality of groundwater at the downgradient waste boundary (257.91(a)(1) and (2)).
- The wells provide samples from the uppermost aquifer (257.91(a) and 257.53).
- The groundwater monitoring system contains two background monitoring wells and four monitoring wells downgradient, thus the number of wells in the system exceeds the minimum specified in 257.91 (c)(1).
- The system contains two background wells (CUF-201, CUF-202) representing conditions unaffected by CCR (257.91(a)(1) and (c)(1)).

- The system contains four wells located downgradient (CUF-205, CUF-206, CUF-207, CUF-208) to monitor groundwater near the waste boundary (257.91(a)(2) and (c)(1)).
- The system includes additional wells as needed to meet the performance standard (257.91(c)(2)).
- Wells are constructed appropriately (257.91(e)).

3.0 Qualified Professional Engineer Certification

I, Michael L. Wall being a Registered Professional Engineer in good standing in the State of Tennessee do hereby certify, to the best of my knowledge, information, and belief that the information contained in this certification is prepared in accordance with the accepted practice of engineering; that the information contained herein is accurate as of the date of my signature below; and that the design and construction of the groundwater monitoring system as described above meets the requirements of 40 CFR § 257.91. Opinions relating to environmental, geologic, and hydrogeologic conditions or other estimates are based on available data and that actual conditions may vary from those encountered at the times and locations where data are obtained, despite the use of due care.
