File: Updated GWPS and SSLs at the
Kingston Fossil Plant Sluice Trench
Vacatur CCR Unit

Date: July 8, 2022

**Reference: Update on Statistically Significant Levels - CCR Rule Groundwater Monitoring
Kingston Fossil Plant, Sluice Trench Vacatur CCR Unit**

In accordance with the federal regulations for management of coal combustion residuals (CCR Rule; 40 CFR Part 257, Subpart D), the Tennessee Valley Authority (TVA) is currently conducting Assessment Monitoring at the Sluice Trench and Area East of Sluice Trench (Sluice Trench) Vacatur CCR Unit at its Kingston Fossil Plant (KIF) in Kingston, Tennessee. The Sluice Trench consists of one CCR surface impoundment subject to the CCR Rule with a single-unit groundwater monitoring system.

As required by the CCR Rule, the owner or operator of a CCR unit shall establish groundwater protection standards (GWPS) for Appendix IV parameters detected during Assessment Monitoring and determine if one or more Appendix IV parameters are detected at statistically significant levels (SSLs) above their GWPS. GWPS for all Appendix IV parameters were originally established and documented in a notice dated April 14, 2020, as required by 40 CFR § 257.95(d)(2) and are provided on Table 1.

As part of ongoing Assessment Monitoring, the first semiannual assessment monitoring event for 2022 occurred February 8-10, 2022, with the additional “resample” event occurring March 22-31, 2022. This technical memorandum presents GWPS and lower confidence bands (LCBs) that have been updated with data collected during the first semiannual monitoring event and resample event for 2022, as well as any identified SSLs after incorporating the additional data collected in 2022. The identification of SSLs was performed as a two-step process:

1. Historical sampling results (January 2019 through March 2022) for Appendix IV parameters from each downgradient well were compared directly to the updated GWPS. If all sample concentrations were below the updated GWPS, no SSLs over the GWPS were identified.
2. Where the direct comparison indicated a concentration above the GWPS, further statistical analysis was performed to identify levels statistically greater than the GWPS, using procedures recommended in the United States Environmental Protection Agency (USEPA) Unified Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities (EPA 530/R-09-007; March 2009). Comparisons were made against a fixed GWPS via LCBs. For each situation where a parameter concentration was greater than the GWPS in step one, the 99% LCB of the fitted line in that monitoring well was calculated using CCR Rule monitoring data collected from January 2019 through March 2022. As recommended in the Unified Guidance, where the 99% LCB exceeds the GWPS at the last sampling event an SSL was identified for the constituent/well pair.

Based on the statistical analysis performed in 2022¹, there continues to be SSLs above the GWPS for cobalt in wells AD-2 and KIF-105. TVA will continue to conduct groundwater monitoring and reporting pursuant to 40 CFR § 257.95.

¹ The groundwater monitoring system was recertified in late 2021. Further investigation and analysis have shown that monitoring well KIF-107 was installed in CCR material, and the concentrations of arsenic, lithium, and molybdenum are attributable to CCR material in the screened interval and are not considered representative of groundwater conditions. As a result, in late 2021, monitoring well KIF-107 was removed from the certified groundwater monitoring system and was replaced with monitoring well KIF-109 which is representative of groundwater conditions in the downgradient area.

TABLE 1: Statistically Significant Levels Above GWPS - KIF Sluice Trench Vacatur CCR Unit

Appendix IV Parameter	GWPS (a)	Updated GWPS (b)	Downgradient wells with analytical results above GWPS (c)	Updated LCBs (d)	SSL LCB > GWPS (e)
Antimony (µg/L)	6	6	None	NA	NA
Arsenic (µg/L)	10	10	None	NA	NA
Barium (µg/L)	2,000	2,000	None	NA	NA
Beryllium (µg/L)	4	4	None	NA	NA
Cadmium (µg/L)	5	5	None	NA	NA
Chromium (µg/L)	100	100	None	NA	NA
Cobalt (µg/L)	6	6	AD-2	13	Yes
			KIF-105	24	Yes
Fluoride (µg/L)	4,000	4,000	None	NA	NA
Lead (µg/L)	15	15	None	NA	NA
Lithium (µg/L)	40	40	None	NA	NA
Mercury (µg/L)	2	2	None	NA	NA
Molybdenum (µg/L)	100	100	None	NA	NA
Radium-226+228 (pCi/L)	5	5	None	NA	NA
Selenium (µg/L)	50	50	None	NA	NA
Thallium (µg/L)	2	2	None	NA	NA

NA – Not applicable

- (a) GWPS documented in notice dated April 14, 2020 [reported in micrograms per liter (µg/L)]
- (b) GWPS updated as of June 10, 2022, with two additional sample results collected on February 8-10, 2022, and March 22-31, 2022 [reported in µg/L]
- (c) Downgradient wells with analytical results above GWPS January 2019 through March 2022 (per 40 CFR § 257.95(b) and (d))
- (d) Most recent value of 99% lower confidence band (LCB) on the mean of Appendix IV groundwater sampling events between January 2019 and March 2022. Upper confidence band (UCB) not shown as it is greater than LCB.
- (e) SSL: “statistically significant level over GWPS” occurs when the updated LCB value at the last sampling event exceeds the updated GWPS
