1.0 RULE REQUIREMENTS

The Legacy CCR Rule requires the owner or operator to prepare a notification following the conclusion of the field investigations to document whether the unit contains both CCR and free liquids. The following text is taken from § 257.100(f)(1)(iii)(F) of the EPA's regulations for CCR units:

If the owner or operator determines that the unit does not contain both CCR and liquids during implementation of the written field investigation work plan, the owner or operator must prepare a notification stating that the field investigation has concluded and that the owner or operator has determined that the unit does not contain both CCR and liquids and does not meet the definition of a legacy CCR surface impoundment. The owner or operator has prepared the notification when the report is placed in the facility's operating record as required by § 257.105(k)(3).

2.0 DETERMINATION

TVA has concluded the field investigation for the Gypsum Stack Complex located at the Widows Creek Fossil Plant (WCF) in general accordance with the Applicability Extension field investigation work plans dated November 8, 2024, May 8, 2025, and November 8, 2025. It has been determined that the WCF Gypsum Stack Complex does not contain both CCR and free liquids, and therefore does not meet the definition of a legacy CCR surface impoundment.
